

PRESENTING

Protecting Your Investment  
Has Never Been So Simple.

# THE PRODUCT

Dubois Agrinovation proudly presents its new retractable low tunnel system perfect for North American weather. It is simple, easy to set up, and the investment cost is 3 times less expensive than high tunnels.

This system can be adapted to your productions. It includes hoops, clear thermal film perforated on both sides, and bungee elastics. The elastics allow to maintain the structure in place and to pull up or down the sides according to the type of micro climate that you need.

## All the facts

Easy to install

Structure can be moved (ideal for growers who are on rented land)

3 times less expensive than high tunnel

System can be adapted to the type of crop

Perfect for North American climate

Possibility to pull the sides up or down

Production season extended

Effective yield

Fewer diseases caused by water

Protection against wind, hail, and heavy rain

Can also be used with ProtekNet insect netting

## All the facts

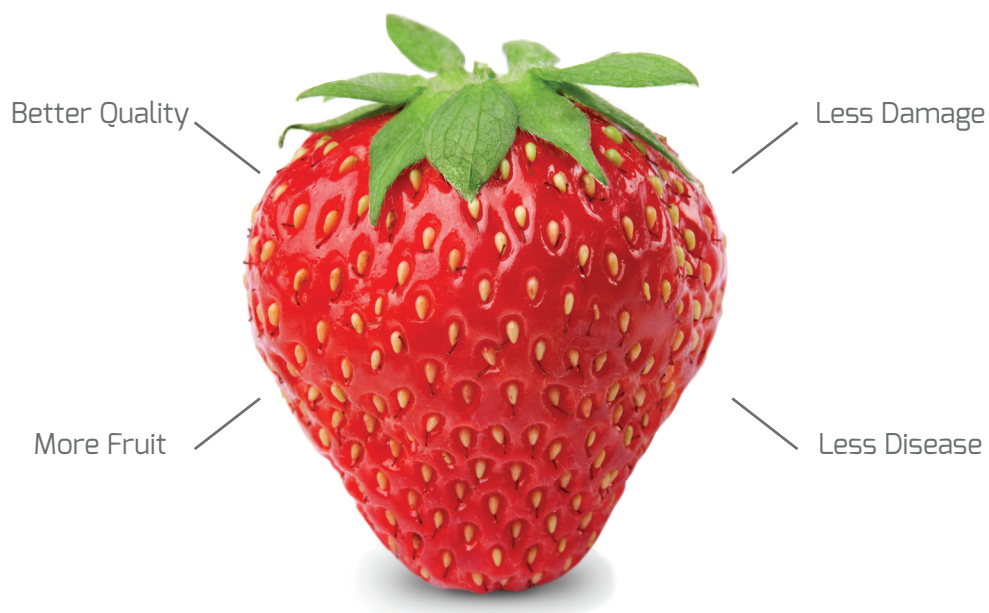

70% increase of flowers per plant\*

33% increase in marketable fruit\*

Significantly reduces damage caused by wind\*\*

Significantly reduces damage caused by rain\*

Significantly reduces grey mold and anthracnose\*

Steel stakes to anchor the hoops					
11	22	BROANCR18GALV	18 " (long) 46 cm		Galvanized Steel

\*\*\* For this hoop, you need to calculate 2 stakes BROANCR18GALV

# TESTIMONY

## Some of our clients comment

"I am very very happy with Tunnel Flex on all my vegetables and strawberries, I was still picking strawberries in mid-November and I am in Saskatchewan.

That's the way to go, we got big winds and it doesn't affect my TunnelFlex, just little bend but it destroyed all my high tunnel."

- Charles Sudom / Regina, Saskatchewan

"Early tomato plants are doing well in Tunnel Flex. On cool nights, row cover can be easily installed for added frost protection. "

- Dan Sheedy / Cobden, Ontario

"The product is built really well...great product and I am very happy with it! Looking forward to purchasing another kit."

- JC

"Great product, had an extreme wind test (> 110 km/h) after 60mm of rain and was able to fully recover my tunnels with only minor damage - wish I could say the same for my greenhouse. Strawberry production in tunnels far exceeds production without; highly recommend this product."

- Chuck Bass
